Obesity is a Global Health Problem

Estimated Overweight & Obesity(BMI ≥ 25 kg/m²) Prevalence, Males, Aged 15+, 2010

Estimated Overweight & Obesity(BMI ≥ 25 kg/m²) Prevalence, Females, Aged 15+, 2010

Source: World Health Organization global infobase

Prevalence of Metabolic Syndrome

USA – 22.9% (Sanchez et al., Journal of the American College of Cardiology, 2013)

China – 21.3% (Xi et al., Preventive Medicine, 2013)

India – 31.6% (Gupta ., Int. J Cardiol, 2004)

Bangladesh (Urban) – 45% (Saquib et al., BMC Public Health, 2013)

Sri Lanka – 24.3% (Katulanda et al, Diabetol Met Syn, 2012)

Why do Asians have a similar / higher prevalence of metabolic syndrome compared to Western Populations, despite having a lower prevalence of obesity?

Diabetes Mellitus – A Global Challenge

NORTH AMERICA AND CARIBBEAN

- More healthcare dollars were spent on diabetes in this region than any other
- 1 in 10 adults in this region has diabetes

38 M

MIDDLE EAST AND NORTH AFRICA

- 1 in 9 adults in this region has diabetes
- More than half of people with diabetes in this region don't know they have it

34 M

EUROPE

- 1 out of every 3 dollars spent on diabetes healthcare was spent in this region
- 21.2 million people in this region have diabetes and don't know it

55 M

WESTERN PACIFIC

- 1 in 3 adults with diabetes lives in this region
- 6 of the top 10 countries for diabetes prevalence are Pacific Islands

132 M

26 M

SOUTH AND CENTRAL AMERICA

- Only 5% of all healthcare dollars for diabetes were spent in this region
- 1 in 11 adults in this region has diabetes

15 M

AFRICA

- Over the next 20 years, the number of people with diabetes in the region will almost double
- This region has the highest mortality rate due to diabetes

70 M

SOUTH-EAST ASIA

- 1 in 5 of all undiagnosed cases of diabetes is in this region
- 1 in 4 deaths due to diabetes occurred in this region

Outline

1. Diagnostic criteria for obesity and metabolic syndrome
2. Pathophysiology of obesity, insulin resistance and metabolic syndrome
3. Benefits of weight loss - evidence
4. Management strategies of obesity and metabolic syndrome
5. Dietary management of metabolic syndrome
6. Weight loss maintenance

Obesity

“Abnormal or excessive fat accumulation that may impair health” - WHO

Assessment - Body Mass Index (BMI)

$$\text{BMI} = \text{Weight (kg)} / \text{Height}^2 \text{ (m)}^2$$

Normal: 18.5 - 24.9

Overweight: 25 – 29.9

Obese: ≥ 30

For Asians:

Normal: 18.5 - 22.9

Overweight 23 – 27.4

Obese ≥ 27.5

Assessment - Body Mass Index (BMI)

$$\text{BMI} = \text{Weight (kg)} / \text{Height}^2 \text{ (m)}^2$$

Normal: 18.5 – 22.9

Overweight: 23 – 24.9

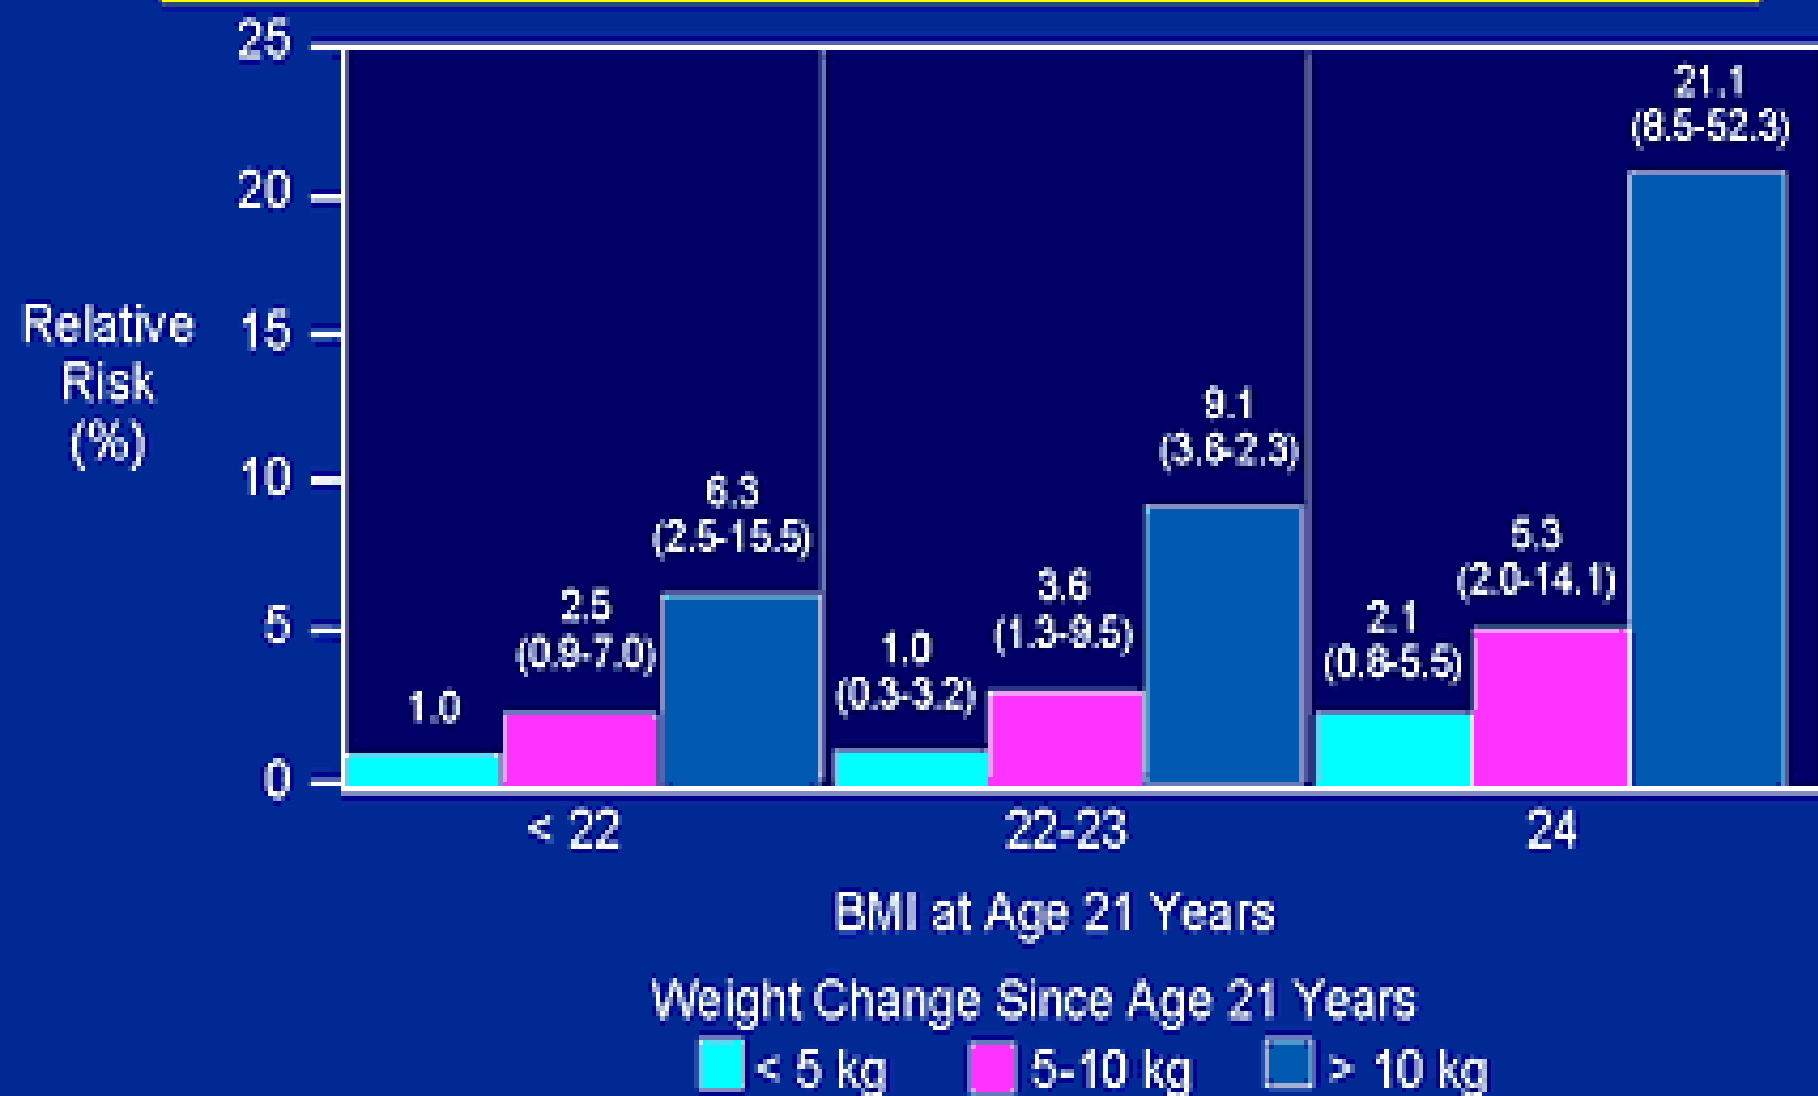

Obese ≥ 25

J Assoc Physicians India. 2009 Feb;57:163-70.

Consensus statement for diagnosis of obesity, abdominal obesity and the metabolic syndrome for Asian Indians and recommendations for physical activity, medical and surgical management.

Misra A¹, Chowbey P, Makkar BM, Vikram NK, Wasir JS, Chadha D, Joshi SR, Sadikot S, Gupta R, Gulati S, Munjal YP; Concensus Group.

Weight Gain and Diabetes Risk

BMI = body mass index.

Chan JM et al. *Diabetes Care*. 1994;17:961-969.

Abdominal Obesity Cut-offs (for South Asians)

Waist Circumference :

$\geq 90\text{cm}$ for men (35.4")

$\geq 80\text{cm}$ for women (31.5")

(Source: WHO, 2008)

Metabolic Syndrome (3 or more)

- Abdominal Obesity
- Triglycerides > 150mg/dl
- HDL Cholesterol
 - - Men < 40 mg/dl
 - - Women < 50 mg/dl
- Blood pressure > 130/85 mmHg
- Glycemia > 100mg/dl

Harmonizing the Metabolic Syndrome:

A Joint Interim Statement of the International Diabetes Federation Task Force on Epidemiology and Prevention; National Heart, Lung, and Blood Institute; American Heart Association; World Heart Federation; International Atherosclerosis Society; and International Association for the Study of Obesity

Obesity increases Diabetes Risk

Cohort study of 59,824 adults aged in Ontario, Canada. Followed for up to 12.8 years

Chiu et al., Diabetes Care, 2011

Co-morbidities of Obesity

Outline

1. Diagnostic criteria for obesity and metabolic syndrome
2. Pathophysiology of obesity, insulin resistance and metabolic syndrome
3. Benefits of weight loss - evidence
4. Management strategies of obesity and metabolic syndrome
5. Dietary management of metabolic syndrome
6. Weight loss maintenance

How does obesity lead to metabolic syndrome?

**Metabolically
Healthy**

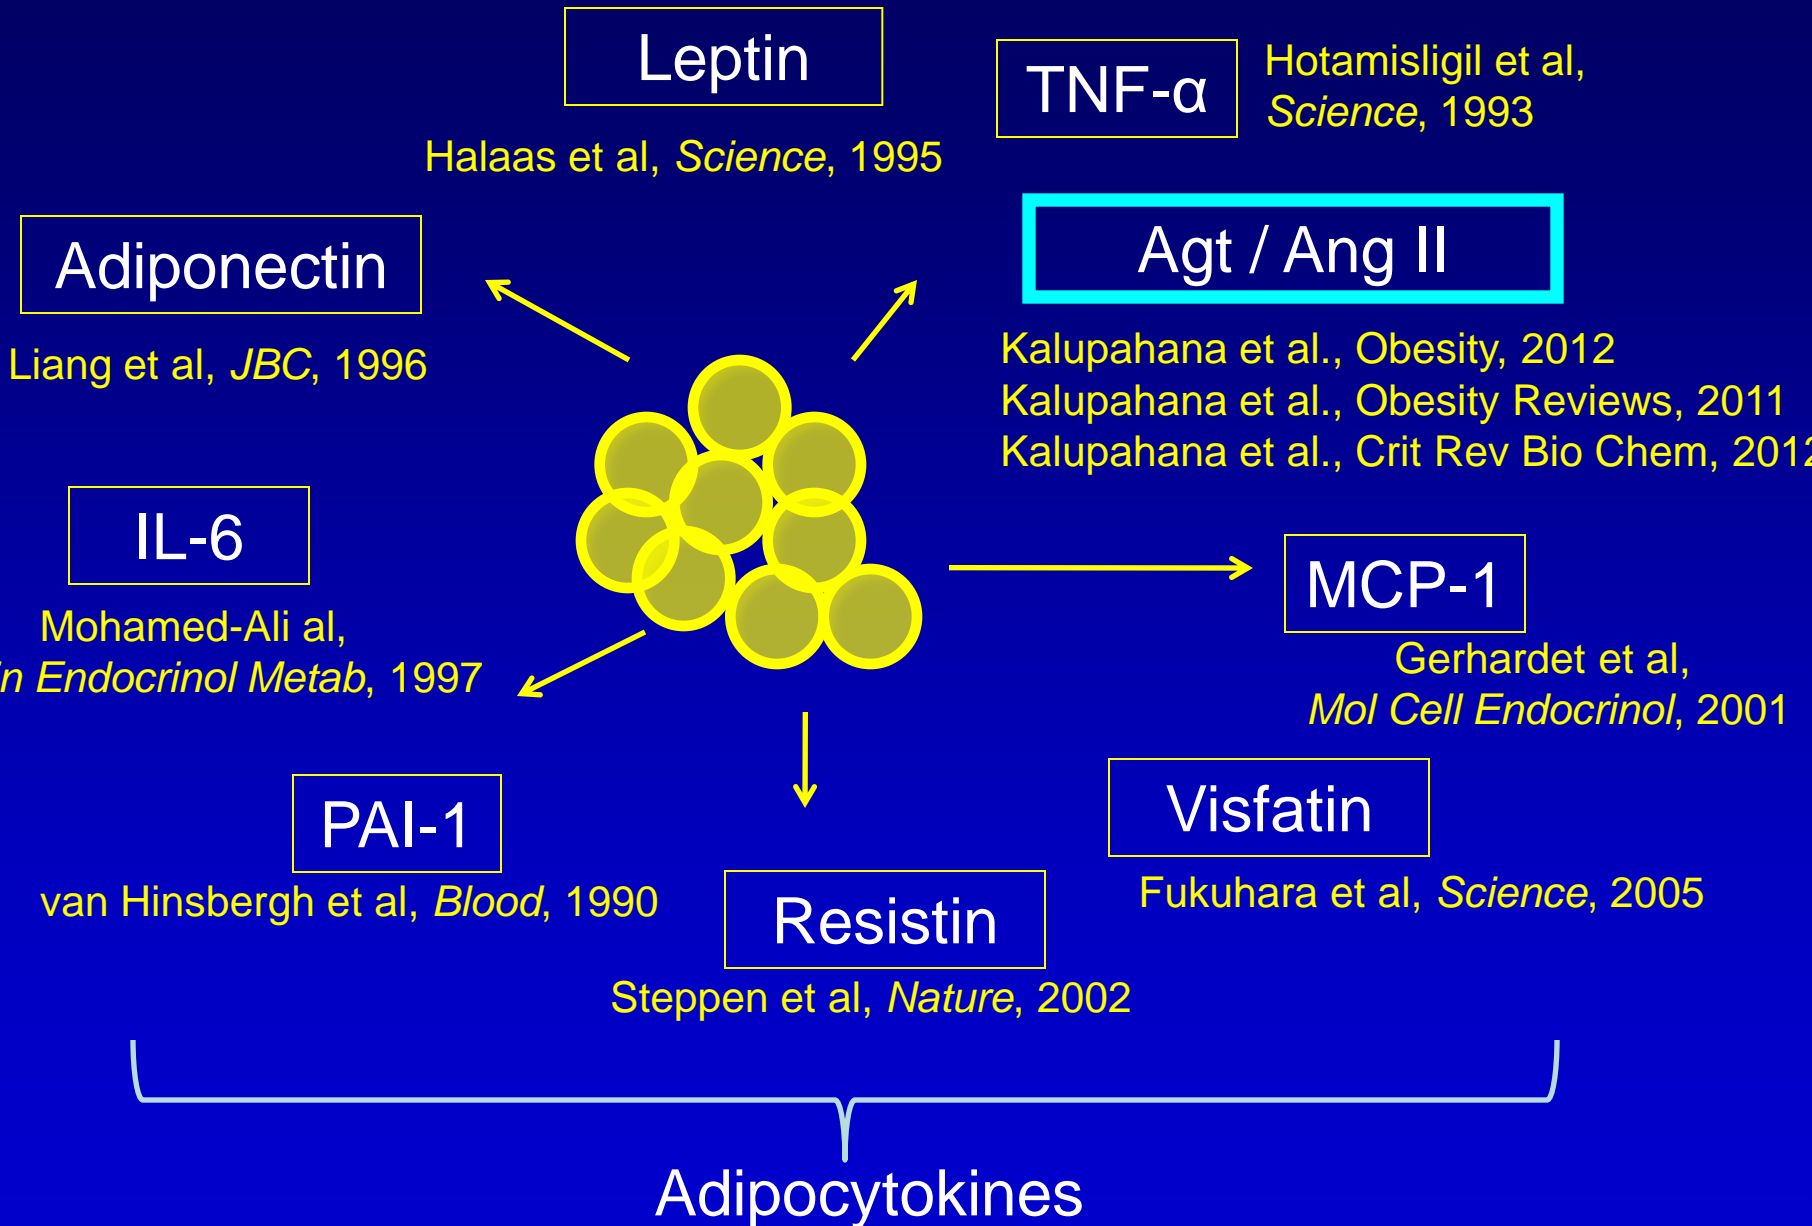

**Metabolic
Disorders**

White adipose tissue stores energy

Pathophysiology of Metabolic Co-morbidities

Adipose Tissue (Lean)

Adipose Tissue (Obese)

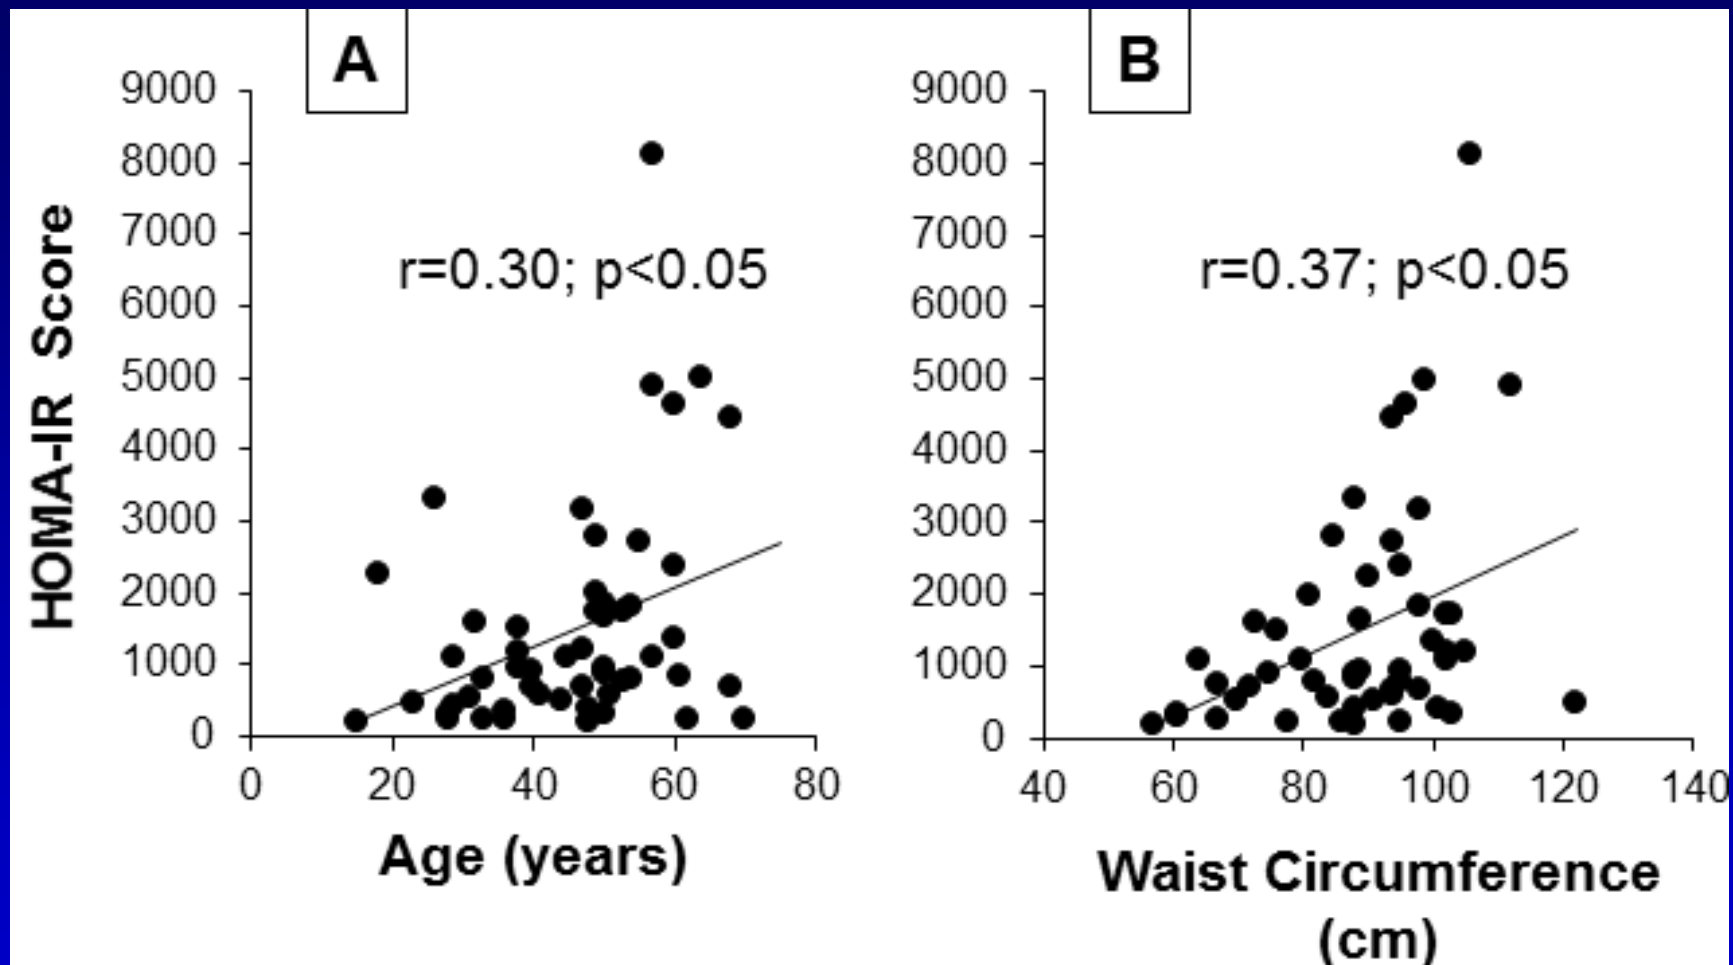

Obesity and insulin resistance

Albracht and Kalupahana et al.,
Journal of Nutritional Biochemistry, 2018

Obesity and insulin resistance

Wijetunga and Kalupahana et al.,
Nutrition and Diabetes, in press, 2018

Causes of Obesity

- Lifestyle
- Environmental
- Economic
- Genetic
- Medical causes
- Medications

Physiological Regulation of Energy Balance

Genetics of Obesity

1. Monogenic form of obesity

e.g. leptin, leptin receptor, carboxypeptidase E, agouti, melanocortin 4 receptor, AGRP, POMC

2. Syndromic obesity

e.g. Prader-Willi syndrome

3. Polygenic forms

Leptin and Obesity

Farooqi and O'Rahilly AJCN, 2008

Outline

1. Diagnostic criteria for obesity and metabolic syndrome
2. Pathophysiology of obesity, insulin resistance and metabolic syndrome
3. **Benefits of weight loss - evidence**
4. Management strategies of obesity and metabolic syndrome
5. Dietary management of metabolic syndrome
6. Weight loss maintenance

Management of the Obese Patient

- Weight loss
- Management of co-morbidities

Benefits of Weight loss

- Strong benefit in glycemic control
- Increases HDL and reduces TG and BP
- Improves fertility
- Resolves NAFLD
- Benefits on mechanical problems
(osteoarthritis, back pain, nerve compressions
etc.)

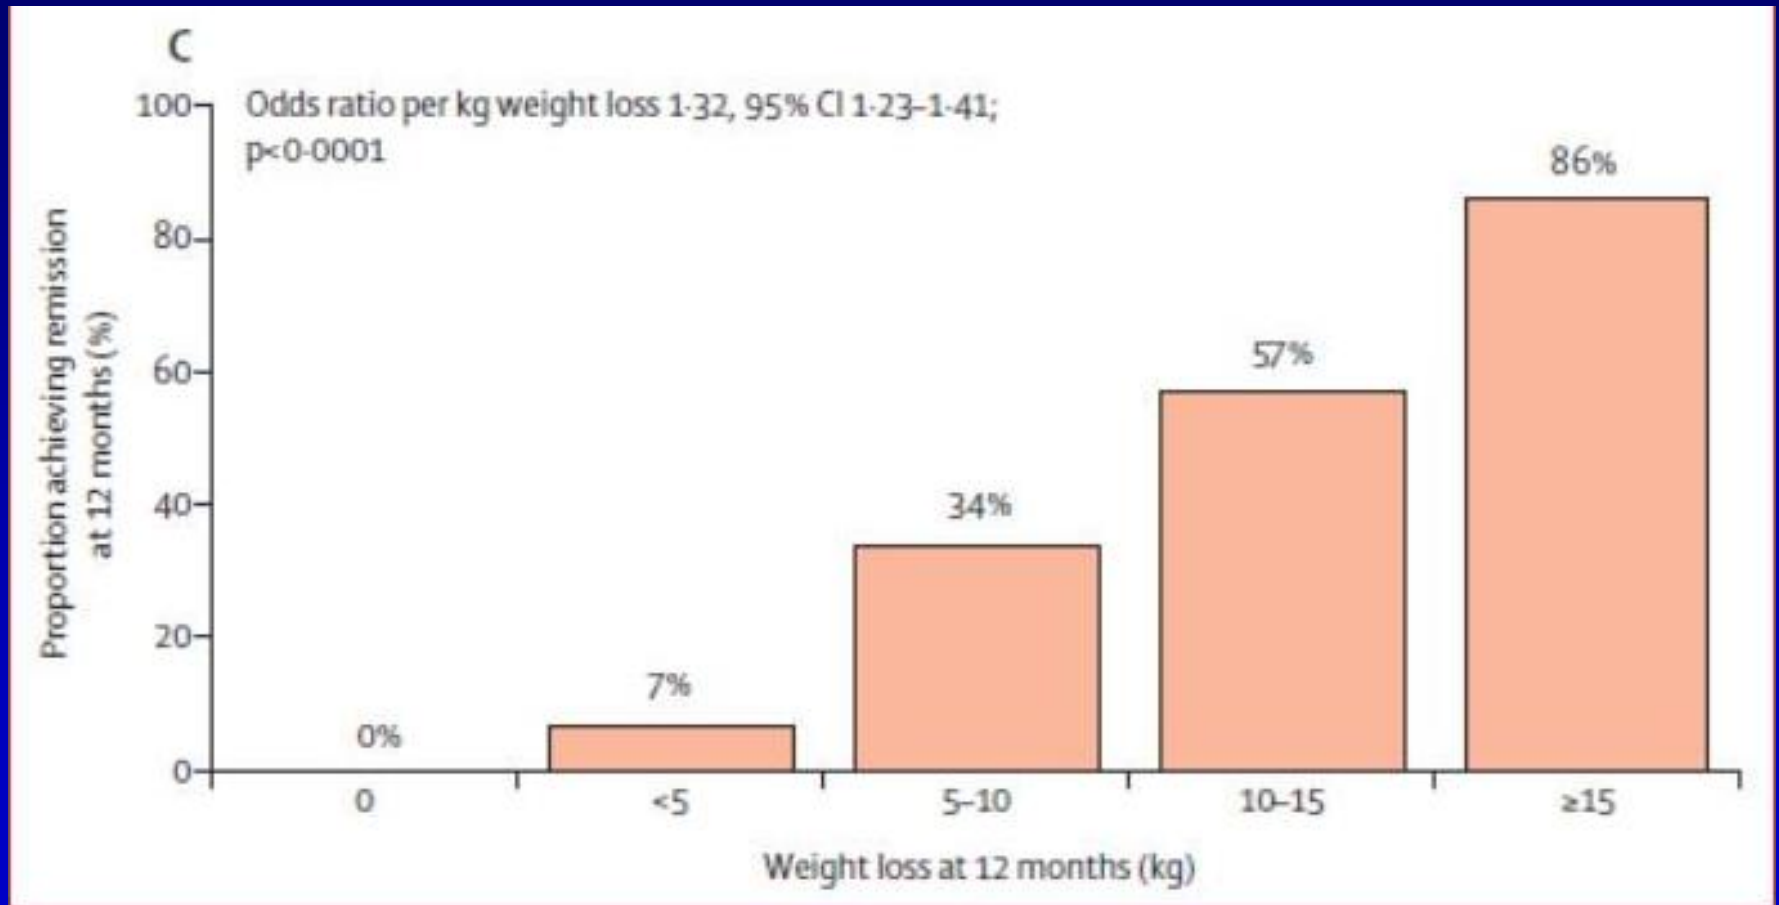

Lifestyle Interventions Summary

- Lifestyle intervention continues to have an effect; most drugs do not

Lifestyle

Study		N	Intervention	Treatment	Risk Reduction
Da Qing	IGT	577	Lifestyle	6 years 20 years	34% - 69%
Finnish DPS	IGT	523	Lifestyle	3+ years 7 years	58%
DPP	IGT	3324	Lifestyle	3 years	58%

Reversal of Diabetes by Weight Loss (DiRECT Trial)

Overweight / Obesity Management Guidelines

Circulation

JOURNAL OF THE AMERICAN HEART ASSOCIATION

2013 AHA/ACC/TOS Guideline for the Management of Overweight and Obesity in Adults: A Report of the American College of Cardiology/American Heart Association Task Force on Practice Guidelines and The Obesity Society

Michael D. Jensen, Donna H. Ryan, Caroline M. Apovian, Jamy D. Ard, Anthony G. Comuzzie, Karen A. Donato, Frank B. Hu, Van S. Hubbard, John M. Jakicic, Robert F. Kushner, Catherine M. Loria, Barbara E. Millen, Cathy A. Nonas, F. Xavier Pi-Sunyer, June Stevens, Victor J. Stevens, Thomas A. Wadden, Bruce M. Wolfe and Susan Z. Yanovski

Circulation. published online November 12, 2013;

Overweight / Obesity Management Guidelines

- **Measure** height and weight and calculate **BMI annually** or more frequently
- Advise overweight and obese adults that the **greater the BMI, the greater the risk of CVD, type-2 diabetes, and all-cause mortality**
- Measure **waist circumference annually** or more frequently in overweight and obese adults

Who should lose weight?

- Overweight + 1 or more CVD risk factors (diabetes, pre-diabetes, hypertension, dyslipidemia, elevated waist circumference)
or
- Obese
- If normal weight or overweight without CVD risk factors – avoid weight gain

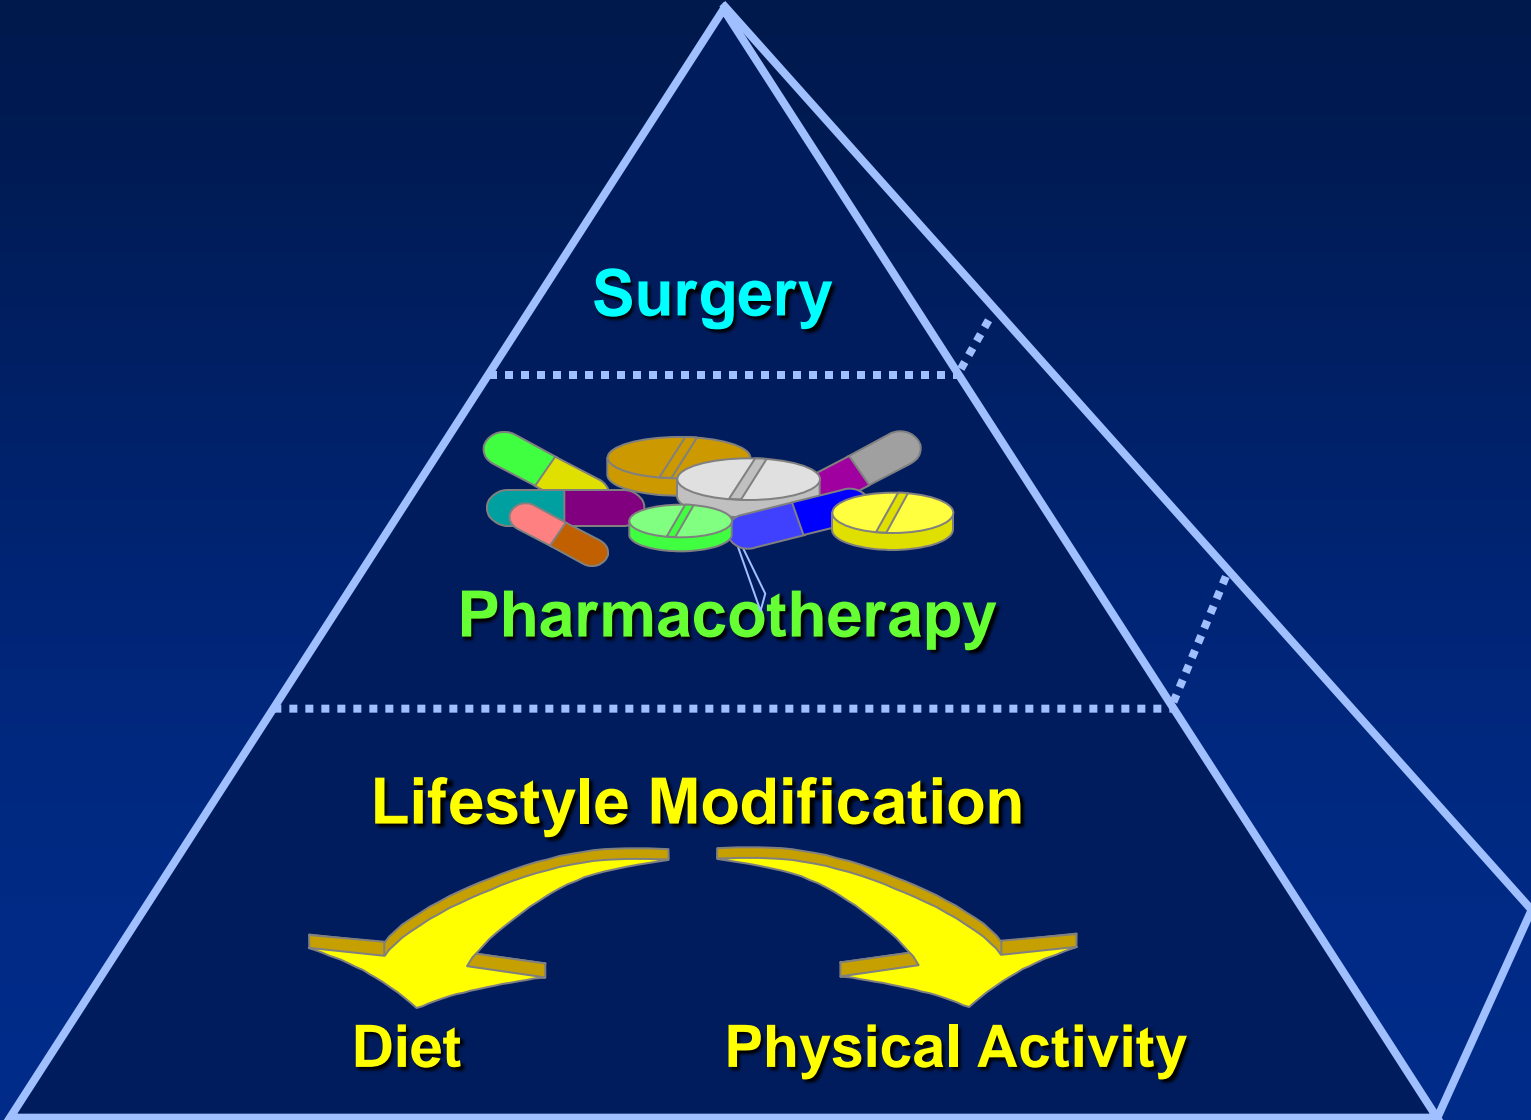

Weight loss - Steps

- Assess Readiness to Make Lifestyle Changes
- Goal: **5% to 10%** of baseline weight in **6 months**
- 500 kcal/day or 750 kcal/day energy deficit
- Comprehensive lifestyle intervention, preferably with a trained interventionist or nutrition professional

Outline

1. Diagnostic criteria for obesity and metabolic syndrome
2. Pathophysiology of obesity, insulin resistance and metabolic syndrome
3. Benefits of weight loss - evidence
4. **Management strategies of obesity and metabolic syndrome**
5. Dietary management of metabolic syndrome
6. Weight loss maintenance

Obesity Treatment Pyramid

Surgical Management

Lap Band

Sleeve Gastrectomy

Gastric Bypass

Low

Effectiveness

High

Risk

Pharmacotherapy

- Central Acting : Phentermine
- Local Acting: Orlistat
- Combination therapy:
 - phentermine + topiramate
- “Off-label” use: Metformin

Lifestyle Modification

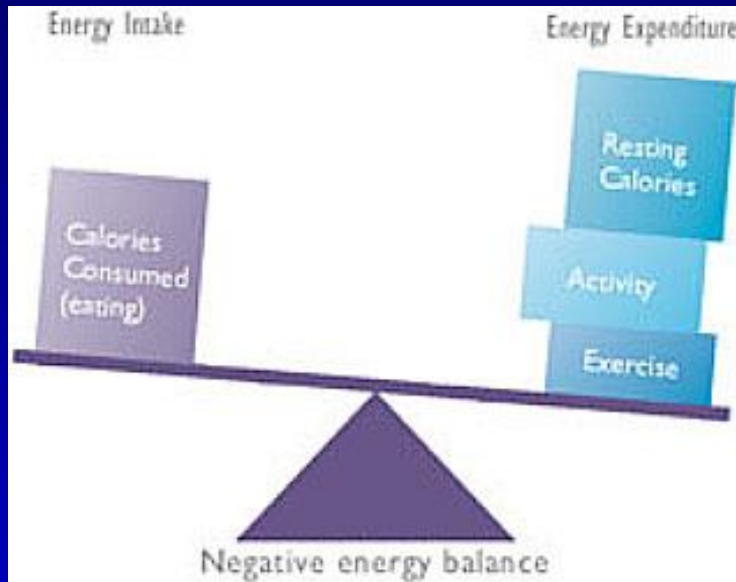

Outline

1. Diagnostic criteria for obesity and metabolic syndrome
2. Pathophysiology of obesity, insulin resistance and metabolic syndrome
3. Benefits of weight loss - evidence
4. Management strategies of obesity and metabolic syndrome
5. Dietary management of metabolic syndrome
6. Weight loss maintenance

Dietary Interventions to treat Obesity

1. Low-calorie diet

fitness.ksc.nasa.gov/articles/metabolism.php

2. Macronutrient composition:

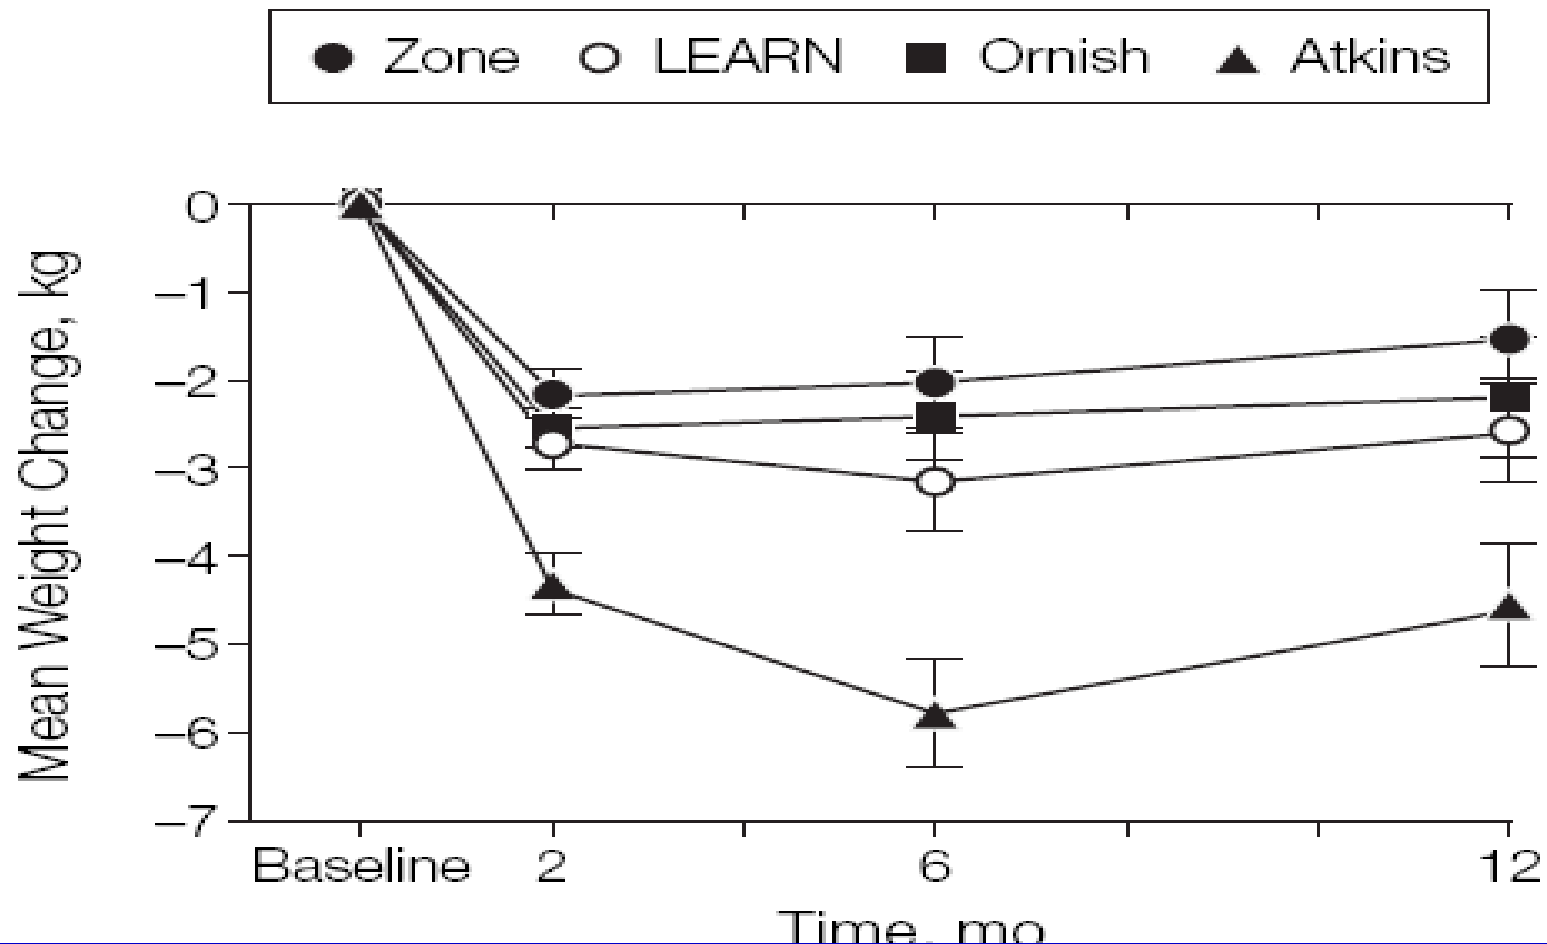

- Low-fat diets
- Low carbohydrate diets

Diets of Varying Macronutrient Composition

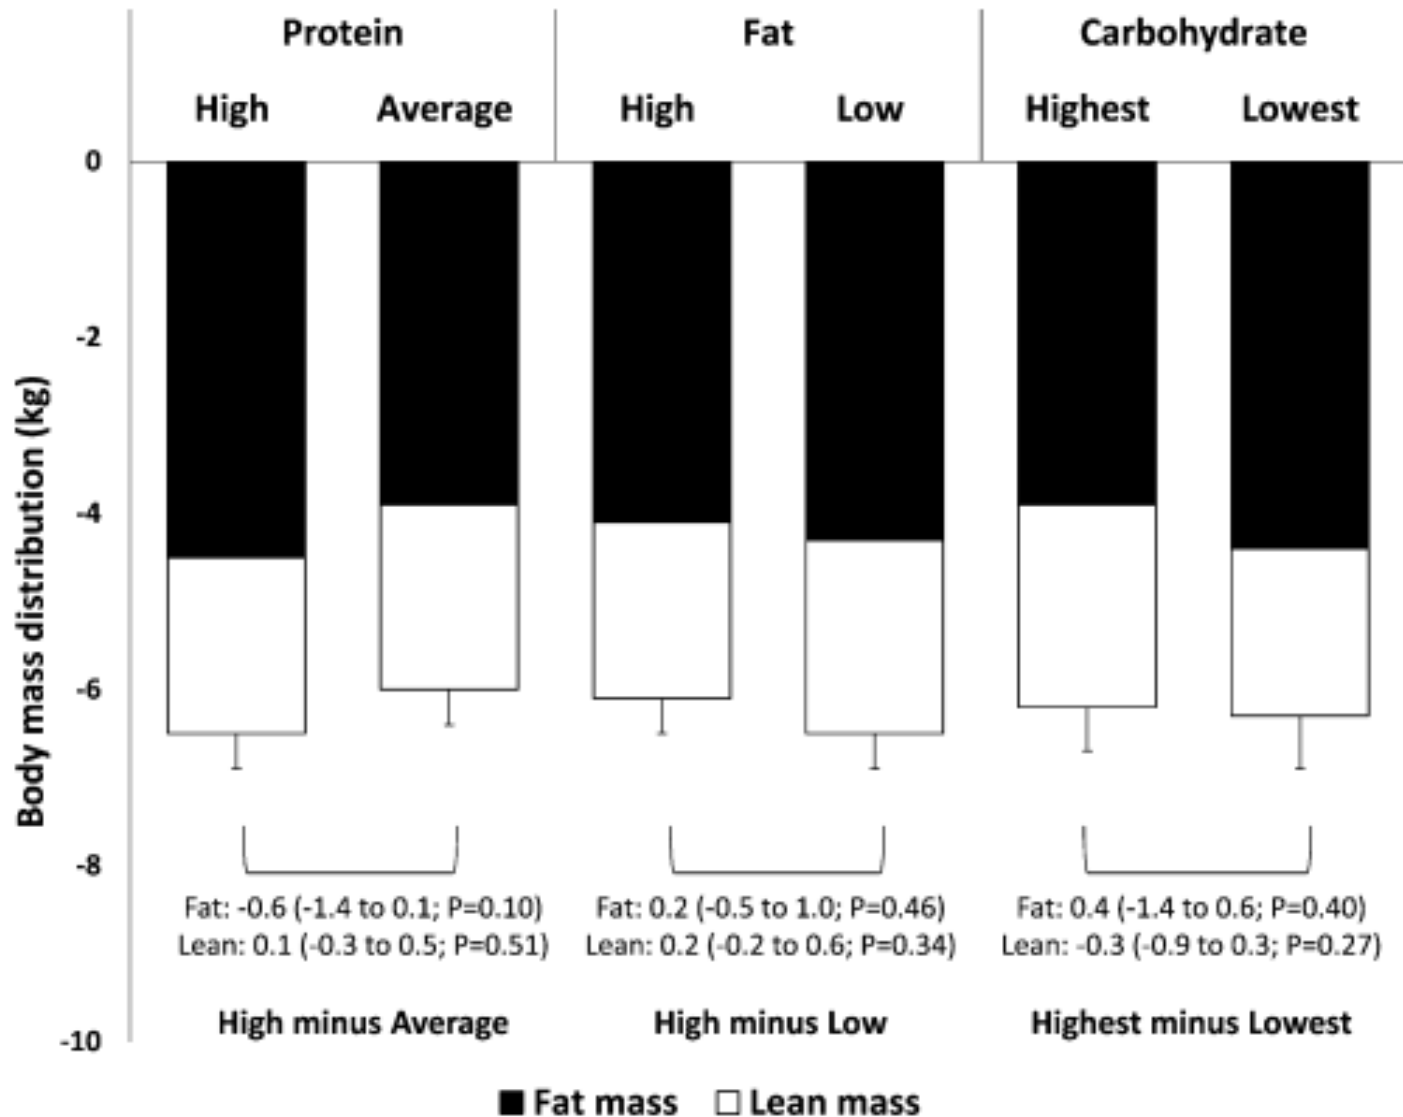

1. Zone diet: Proteins, favorable carbohydrates, and fats in a ratio of 30-40-30
2. LEARN diet - 55% to 60% energy from carbohydrate and less than 10% energy from saturated fat. LEARN stands for Lifestyle, Exercise, Attitudes, Relationships, and Nutrition
3. Atkin's diet: <20g of carbohydrates per day
4. Ornish diet: <10% calories from fat – vegan diet

Effects of Macronutrient Composition on Weight Loss

Figure 2. Weight Change Relative to Baseline

Energy Restriction is More Important Than Macronutrient Composition for Weight Loss

Alternate day fasting

JAMA Internal Medicine | [Original Investigation](#)

Effect of Alternate-Day Fasting on Weight Loss, Weight Maintenance, and Cardioprotection Among Metabolically Healthy Obese Adults A Randomized Clinical Trial

John F. Trepanowski, PhD; Cynthia M. Kroeger, PhD; Adrienne Barnosky, MD; Monica C. Klempel, PhD; Surabhi Bhutani, PhD; Kristin K. Hoddy, PhD, RD; Kelsey Gabel, MS, RD; Sally Freels, PhD; Joseph Rigdon, PhD; Jennifer Rood, PhD; Eric Ravussin, PhD; Krista A. Varady, PhD

Structured Meal Plans Enhance Weight Control

Meal Replacements Enhance Initial and Long-Term Weight Loss

*1200–1500 kcal/d diet prescription

CF = conventional foods; MR = replacements for 2 meals, 2 snacks daily;

Very low calorie diet - DiRECT Trial

Randomised trial at 49 primary care practices in Scotland and England

Inclusion criteria

- 20–65 years old
- T2DM diagnosis \leq 6 years
- BMI 27–45 kg/m²
- HbA1c \geq 6.0%
 - If \leq 6.5%, still on ADM

Intervention

- Total meal replacement (825-853 kcal/day) for 3 m
- Low energy diet (59% CH/13% F/26% P/2% Fibre) – extended to 5 months
- Food reintroduction: 2–8 weeks (\approx 50% CHO, 35% F, 15% P) + increased physical activity (15,000 steps/day)

Reversal of Diabetes by Weight Loss (DiRECT Trial)

Lean et al., *Lancet*, 2017

Physical Activity Recommendations

Minimize sedentary time

Moderate-intensity physical activity 150 min /
wk (2.5 hours)

300min / wk for weight loss

Strength training twice a week

Behavior Therapy

Goal-setting

- Weight-loss goal
- Physical activity goal

Self monitoring

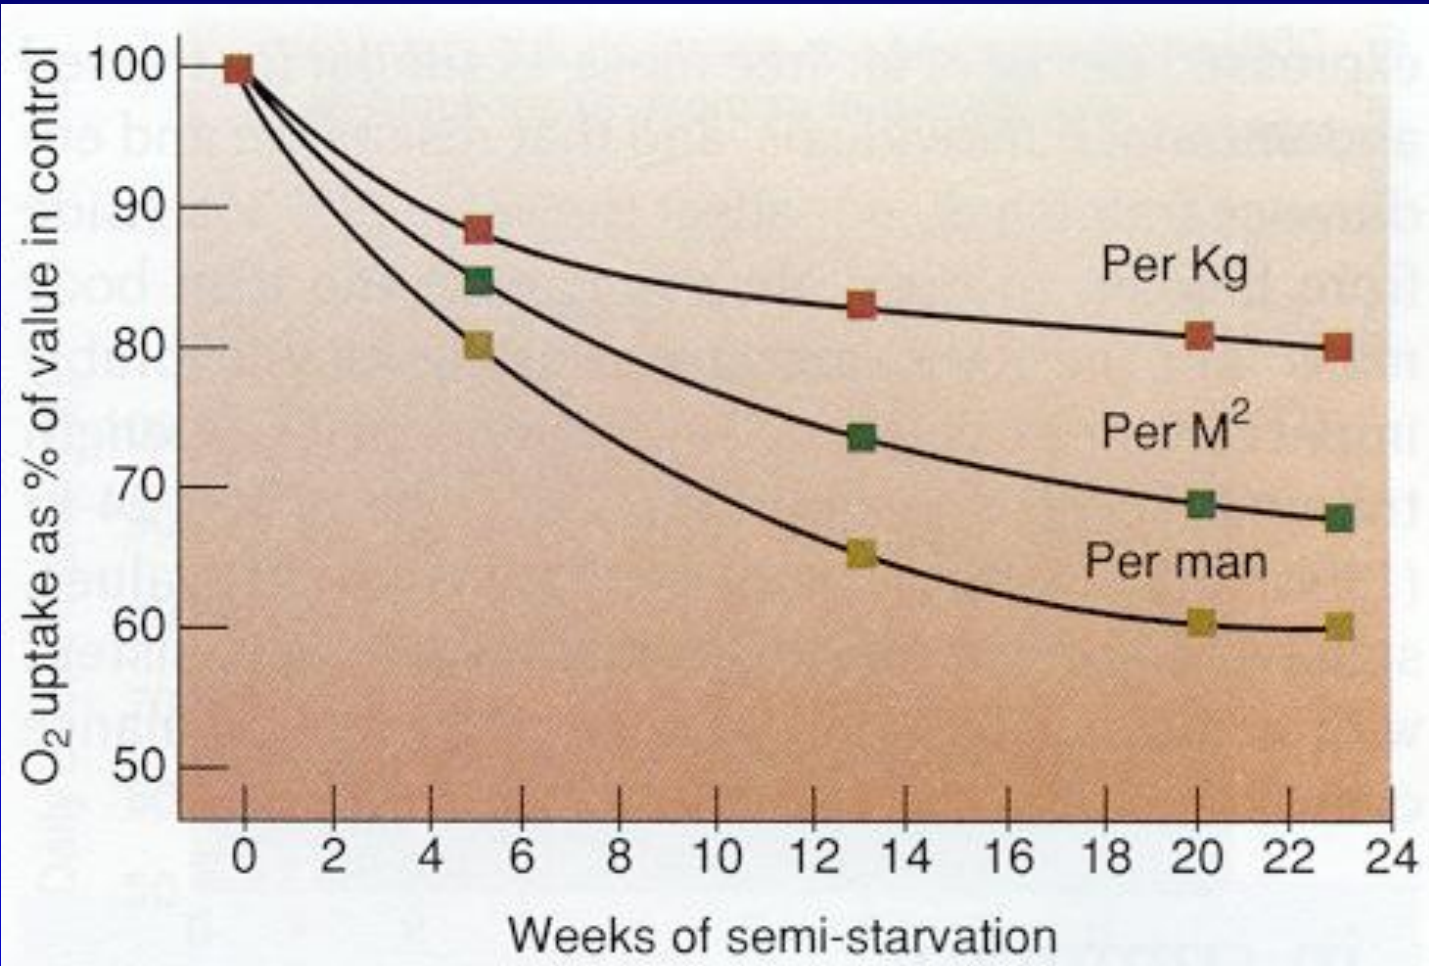

- Body weight
- Food diary

Stimulus control, stress management,
coping strategies

Exercise and Weight Loss

- Exercise may be most critical to help maintain weight loss
- Exercise helps to maintain muscle mass and metabolic rate

Caloric Intake and Resting Metabolic Rate

Effects of Types of Diet and Exercise on Weight Loss

Physical activity recommended for MOST days of week

- **Adult recommendations vary by goal:**
 - Reduce risk of chronic disease: **30 minutes of moderate intensity**
 - Manage weight and prevent weight gain: **60 minutes of moderate to vigorous activity**
 - Sustain a weight loss: **60 to 90 minutes of moderate to vigorous activity**
- **Children and teens: 60 minutes**

Ways to increase physical activity

Take stairs instead of the escalator

Park your car at a distance

Sedentary Behavior and Mortality

IS SITTING

*There's no running away from it:
The more you sit, the poorer your
health and the earlier you may die.*

no matter how fit you are

Sedentary Behavior and Mortality

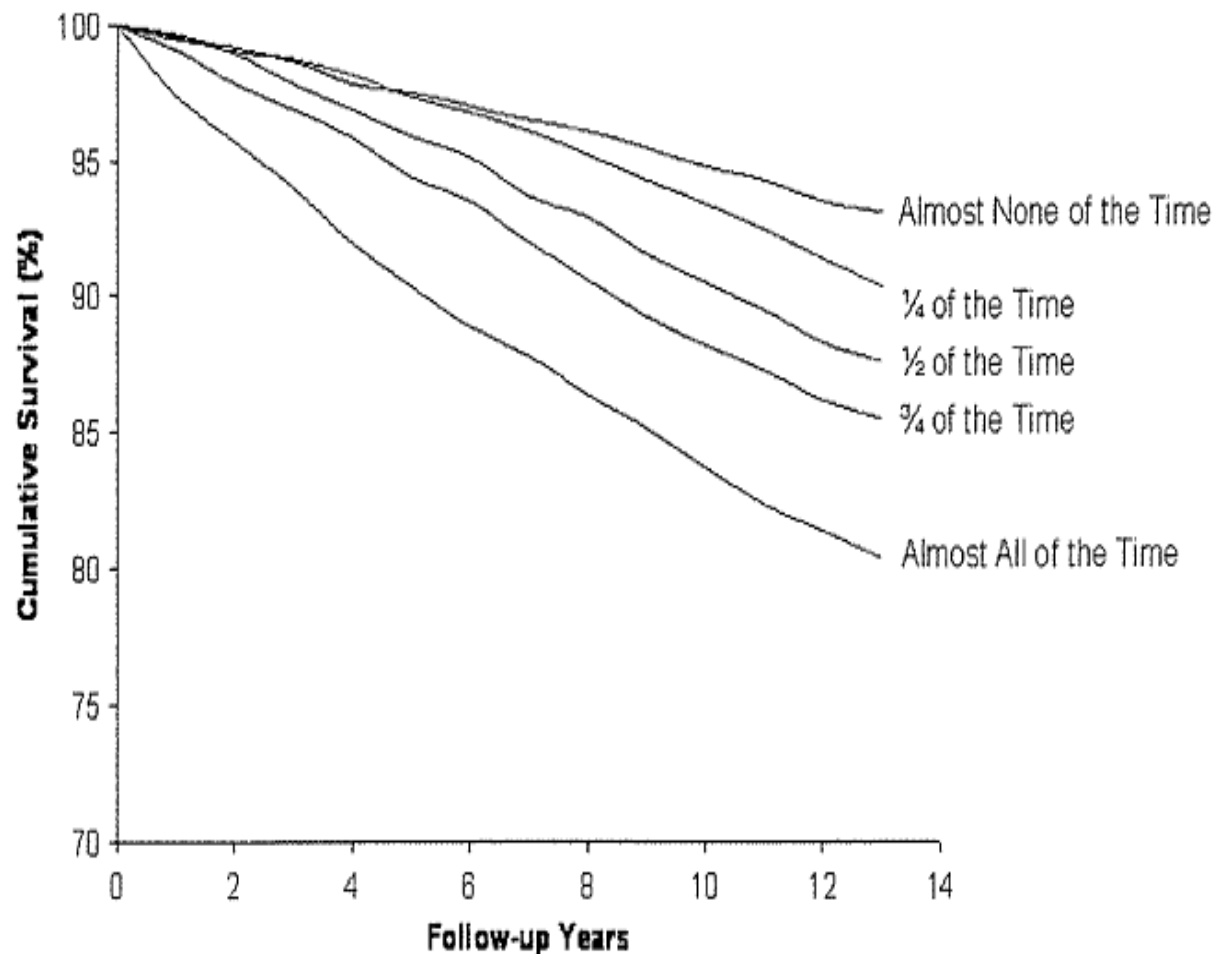

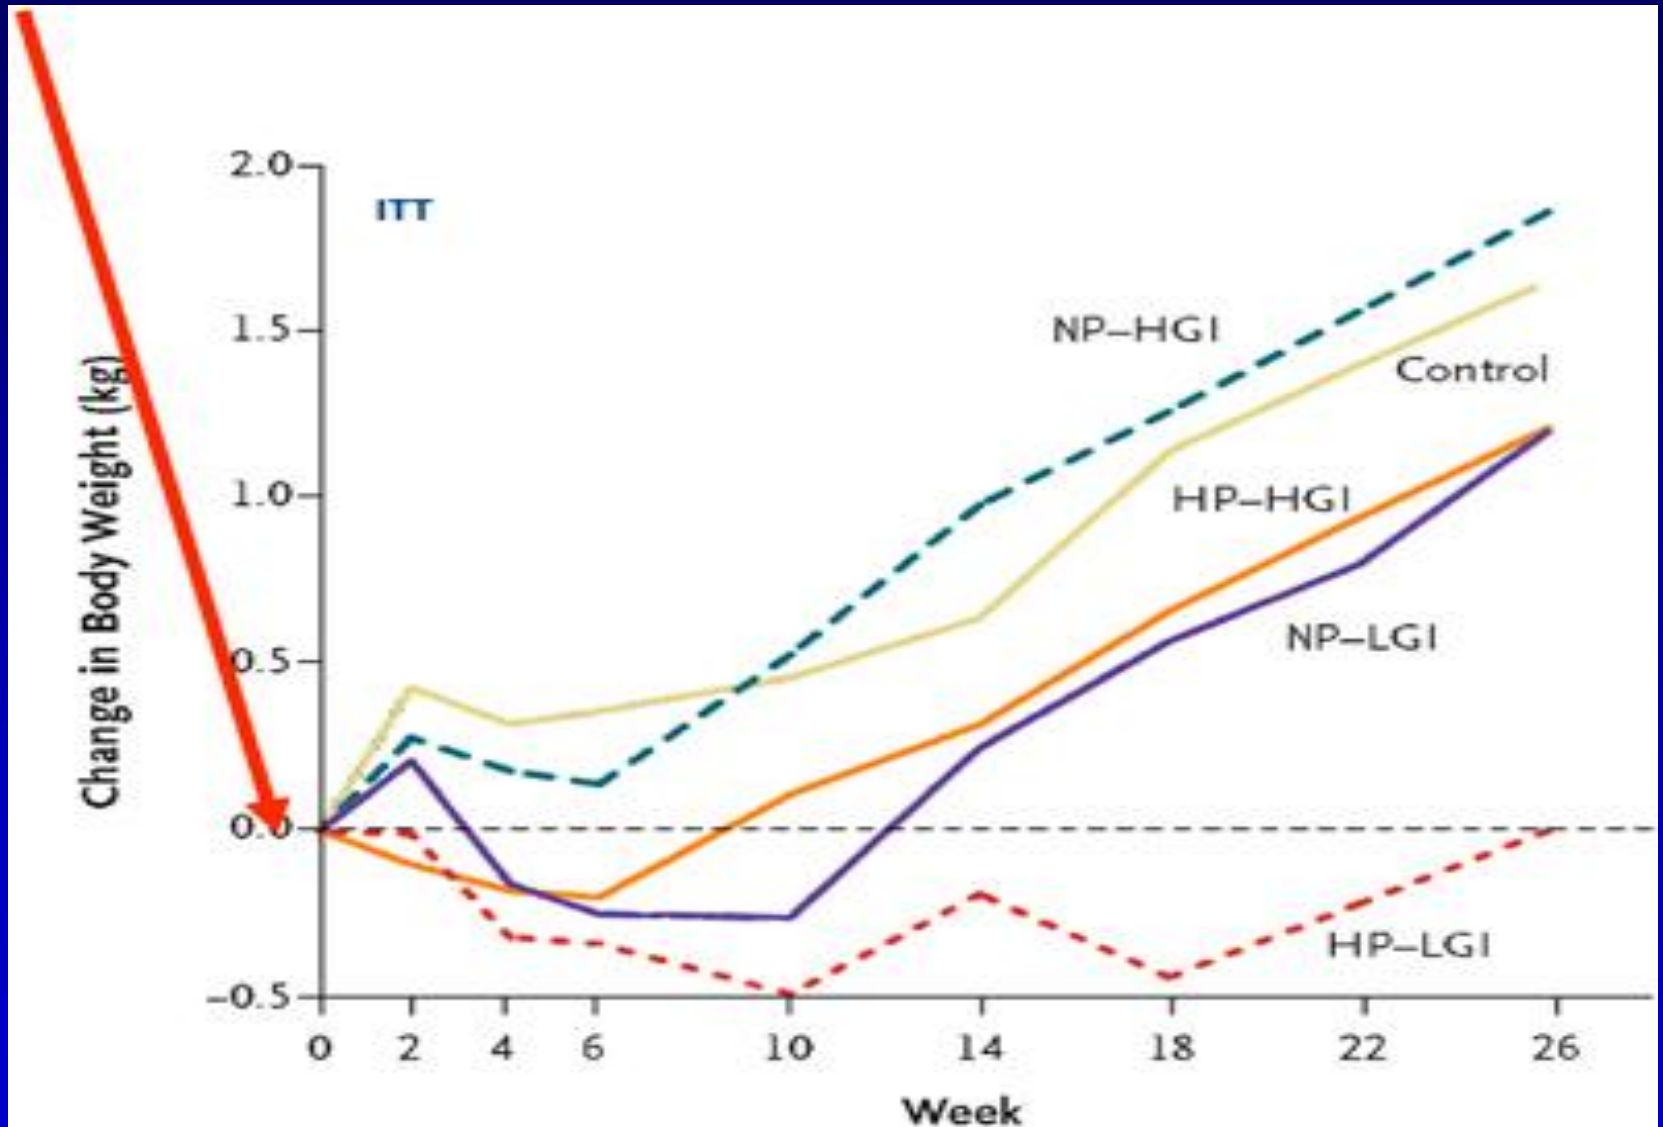

FIGURE 1—Kaplan-Meier survival curve for all-cause mortality across categories of daily sitting time in 17,013 men and women 18–90 yr of age, in the Canada Fitness Survey, 1981–1993. Log-rank $\chi^2 = 174.4$, $df = 4$, $P < 0.0001$. The sample sizes across the categories were 3022 (17.8%), 6652 (39.1%), 4379 (25.7%), 2138 (12.6%), and 822 (4.8%), for the categories of almost none of the time, one fourth of the time, half of the time, three fourths of the time, and almost all of the time, respectively.

Outline

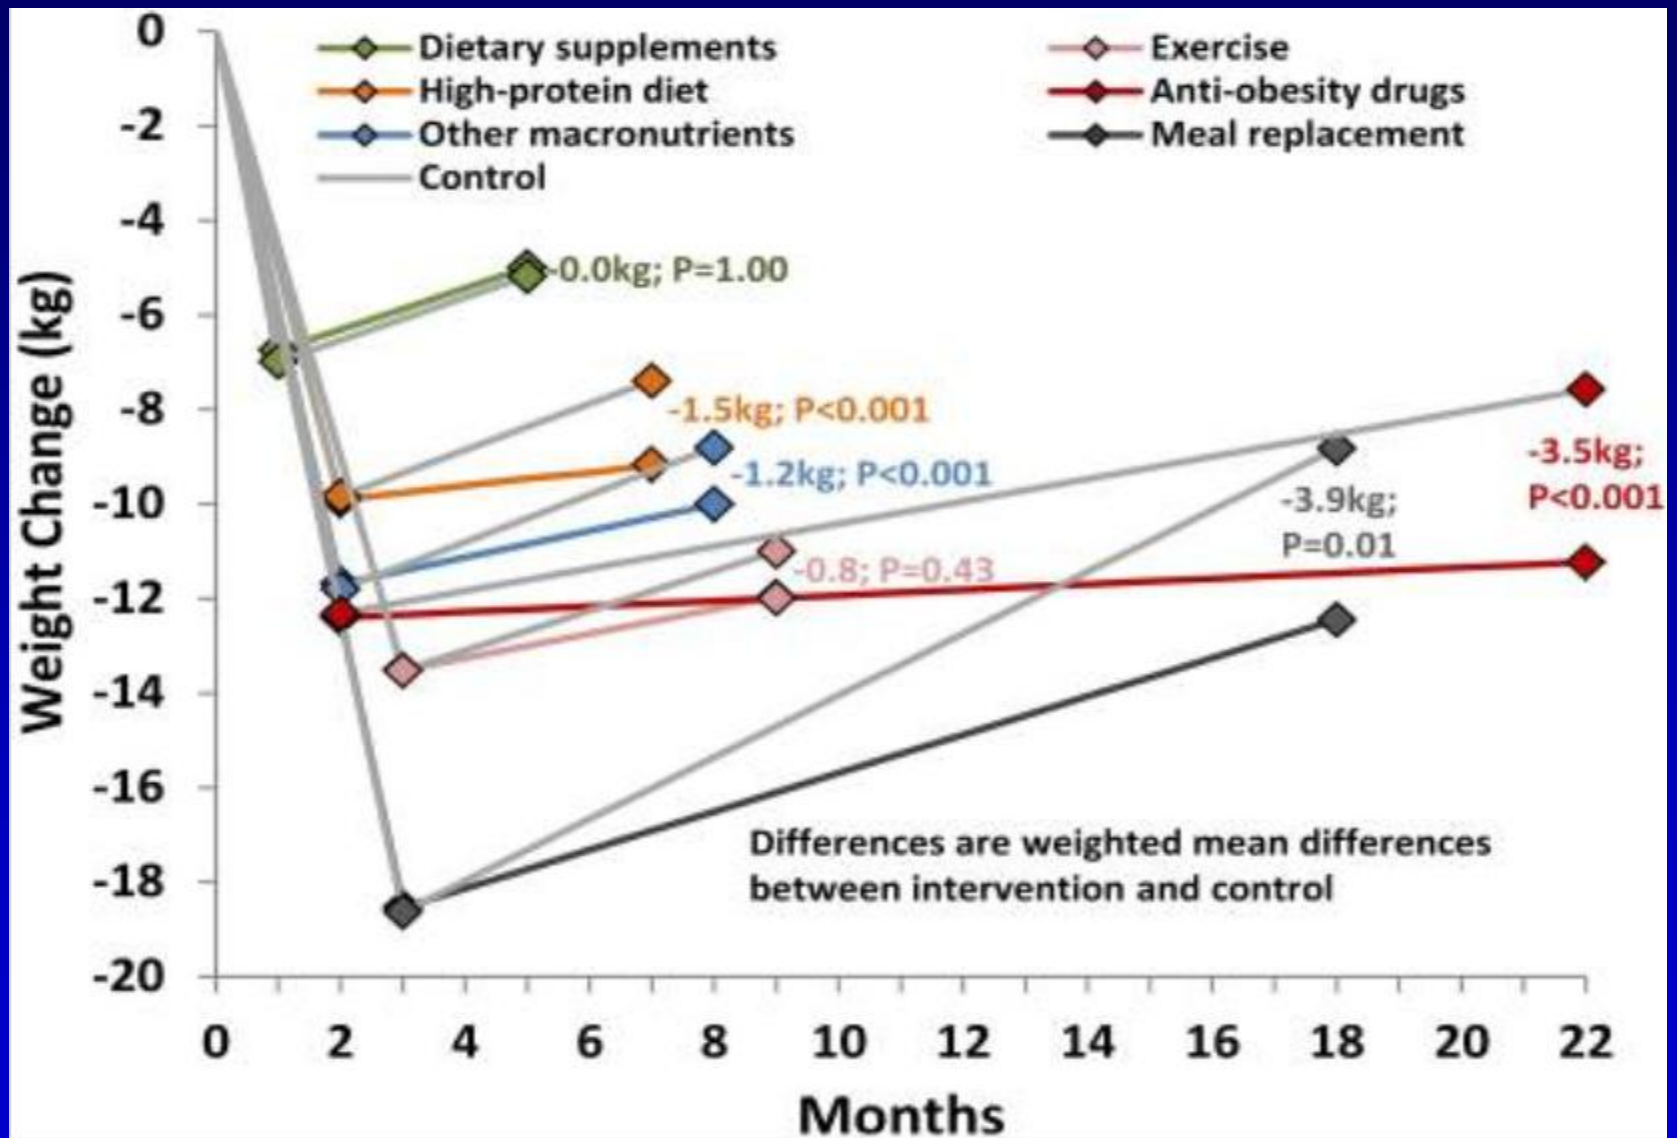

1. Diagnostic criteria for obesity and metabolic syndrome
2. Pathophysiology of obesity, insulin resistance and metabolic syndrome
3. Benefits of weight loss - evidence
4. Management strategies of obesity and metabolic syndrome
5. Dietary management of metabolic syndrome
6. **Weight loss maintenance**

High-protein Diets are More Effective in Weight Loss Maintenance – Diogenes Study

Larsen et al, *New England Journal of Medicine*, 2010

Meal replacements, anti-obesity drugs and high-protein diets for weight loss maintenance

Weight loss maintenance

Predictors of long-term weight loss success:

- Engaging in high levels of physical activity
- Eating a diet that is low in fat and calories
- Eating breakfast
- Self-monitoring
- Maintaining a consistent eating pattern
- Catching “slips” before they turn into larger regains

Prevention of Childhood Obesity

- Calculate, chart and classify BMI for all children 2-18 yrs at least yearly
- Promote breastfeeding
- Diet and physical activity:
 - **5** Five or more servings of fruits and vegetables per day
 - **2** Two or fewer hours of screen time per day, and no television in the room where the child sleeps
 - **1** One hour or more of daily physical activity
 - **0** No sugar-sweetened beverages

Summary

- Obesity and metabolic syndrome are global public health problems of epidemic proportions
- Adipose tissue dysfunction is a link between obesity and its metabolic co-morbidities
- There is strong evidence for benefits of weight loss in improving metabolic comorbidities in obese individuals
- Intensive lifestyle modification is the mainstay in weight management
- Meal replacements are an effective way of achieving energy restriction and weight loss

A scenic view of a winding road through a lush green landscape. In the foreground, a paved road curves through a well-maintained lawn. To the right, a dark wooden fence runs along the edge of the road, with several white decorative lamp posts. The background features a large, multi-story building with a light-colored facade and a red roof, partially obscured by trees. A large tree with vibrant pink cherry blossoms stands prominently on the left. The sky is a clear, bright blue. The text "Thank You !" is overlaid in the center of the image in a yellow, sans-serif font.

Thank You !
